Flashcards

Learning lab: A free study site. It is not a job claim and it sells nothing.

Artifact: A file the run wrote, so the result is not only a memory.

Pure function: Same input, same output, no hidden write.

Status code: The number HTTP uses to say how the request finished.

Secret: A value that grants access. It is not lesson content.

Golden set: Questions with agreed answers, reused so scores compare.

Token: The piece of text a given model reads or emits.

Grounding: Tying a claim to a passage you can open.

Context window: The maximum text one model call considers.

Temperature: A sampling control. It is not a truth dial.

Refusal: Stopping instead of filling a gap with a guess.

Model card: The provider's note of intended use and limits. Confirm it is current.

Done check: The condition that says the output is finished enough.

Role: The label that says whether a line is an instruction, a person, or a tool.

Schema: The declared shape of an output or a tool argument.

Regression: A check that used to pass and now fails.

p95: A point on the slow tail: about 95 of 100 samples are faster.

Diff: The lines that changed between two versions.

Independent, free, learning-only student project. Not affiliated or endorsed. Trademarks belong to their owners. Nothi
